

# Natural Ant Control

*Hint: For the vegetable garden: cover your spinach and lettuce with insect cover, it also protects from the birds!*

## Natural Ant Control Remedies:

Cinnamon Sticks & Garlic Cloves, and Cloves: place these around openings that typically attract ants. They will avoid these areas!

Vinegar: put vinegar or apple cider vinegar in a spray bottle and spray on areas where you have seen ants.

Black Pepper: Sprinkle black pepper in anthill.

Boiling Water: For a serious anthill problem, pour boiling water over the anthill.

Mint: Mint destroys the smelling capabilities of ants and prevents them from entering your home. You can plant mint around your home near doors, etc. Or, you can place mint leaves in and around windows. You can even place mint leaves on your pantry shelves too. By the way, peppermint also deters mice. They hate the smell.

Ashes: Place wood ashes around your house or directly on anthills to rid the area.
